Introduction

This requirement has previously been specified and implemented in Shopify as part of **CR SET 42 - Adding customs support for international shipment**. This change request set specifies necessary changes for adding customs support in PrestaShop and WooCommerce.

Requirements

Type of change

The next requirements need to be updated/added:

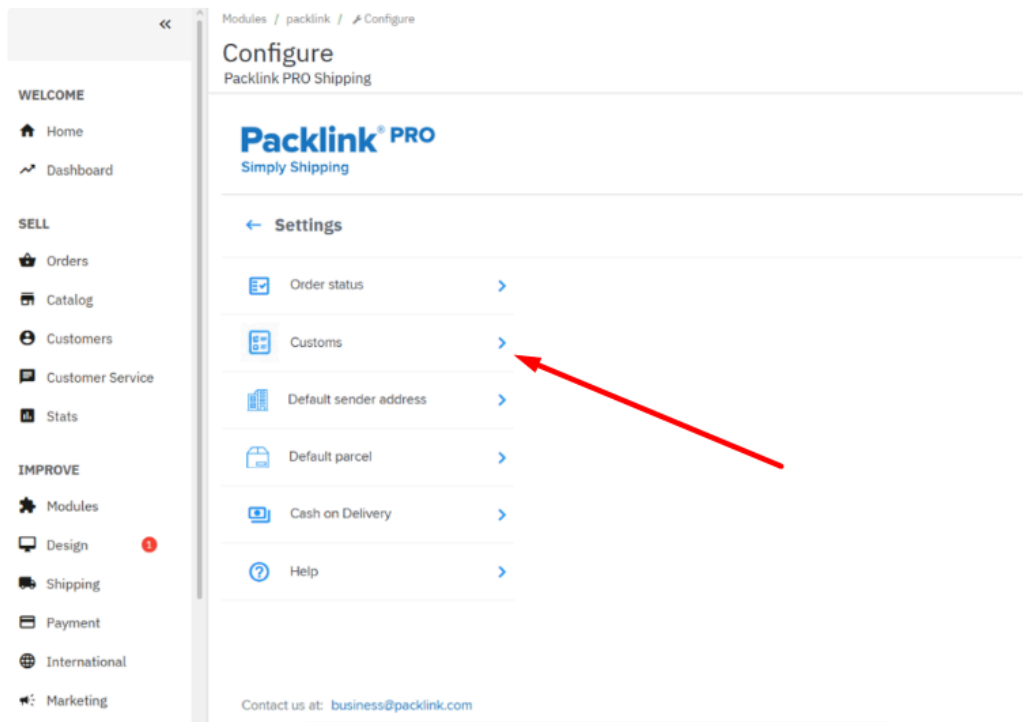

- UI requirements: adding a new settings section for mapping customs attributes.
- Functional requirements: add customs invoice synchronization.
- Functional requirements: Update the shipment synchronization.

- UI requirements: extending the order details page with customs information.

UI

Extend setting menu

Add new settings menu: *Customs*.

Mapping of data

All integrations should offer a setting of default values for required customs fields.

Depending on the integration, since some of the fields are customs-specific, the next required fields should be checked if they exist in the integrated system:

- Product → HS code
- Product → country of origin
- Customer → tax ID/VAT number
- Customer → phone number

i Other required fields from customs data are standard fields which all systems should support already.

If the system doesn't support some of the mentioned fields, then it should be checked if the system offers custom attributes on these entities (product and customer).

If custom attributes exist, then integration should offer mapping of missing fields to system custom attributes.

Functional requirements

Customs synchronization

The customs data schema can be found below:

Packlink Attribute name	Packlink Attribute type	Packlink Attribute required	Packlink Attribute description
invoice_number	string	Yes (if reason_for_export= <i>PURCHASE_OR_SALE</i>)	Identifier for a commercial invoice. If the reason_for_export is <i>PURCHASE_OR_SALE</i> , then the invoice number is requested.
sender	object	Yes	See Sender data .
receiver	object	Yes	See Receiver data .
inventory_of_contents	array of objects	Yes	See Inventory of contents data .
reason_for_export	string	Yes	Motivation of shipment. Enum: [<i>PURCHASE_OR_SALE</i> , <i>PERSONAL_BELONGINGS</i> , <i>SAMPLE</i> , <i>DOCUMENTS</i> , <i>RETURN</i>]
shipment_details	object	Yes	See Shipment details data .
signature	object	No	See Signature data .

Sender data

Packlink Attribute name	Packlink Attribute type	Packlink Attribute required	Packlink Attribute description
sender.user_type	string	Yes	Type of sender. Enum: [<i>PRIVATE_PERSON</i> , <i>COMPANY</i>]
sender.full_name	string	Yes	Full name including all names and surnames.
sender.tax_id	string	Yes (if user_type= <i>PRIVATE_PERSON</i>)	Tax id of a user, required in case user_type is <i>PRIVATE_PERSON</i> .
sender.company_name	string	Yes (if user_type= <i>COMPANY</i>)	Name of the company, required in case user_type is <i>COMPANY</i> .
sender.vat_number	string	Yes (if user_type= <i>COMPANY</i>)	VAT number of the company, required in case user_type is <i>COMPANY</i> .

sender.eori_number	string	No	Economic Operator Registration and Identification number.
sender.address	string	Yes	Full address including street name, number, apartment, etc.
sender.postal_code	string	Yes	Postal code.
sender.city	string	Yes	City.
sender.country	string	Yes	Country name.
sender.phone_number	string	Yes	Phone number including country and area code.

Receiver data

Packlink Attribute name	Packlink Attribute type	Packlink Attribute required	Packlink Attribute description
receiver.user_type	string	Yes	Type of receiver. Enum: [PRIVATE_PERSON, COMPANY]
receiver.full_name	string	Yes	Full name including all names and surnames.
receiver.tax_id	string	Yes (if user_type=PRIVATE_PERSON)	Tax id of a user, required in case user_type is PRIVATE_PERSON.
receiver.company_name	string	Yes (if user_type=COMPANY)	Name of the company, required in case user_type is COMPANY.
receiver.vat_number	string	Yes (if user_type=COMPANY)	VAT number of the company, required in case user_type is COMPANY.
receiver.eori_number	string	No	Economic Operator Registration and Identification number.
receiver.address	string	Yes	Full address including street name, number, apartment, etc.
receiver.postal_code	string	Yes	Postal code.
receiver.city	string	Yes	City.
receiver.country	string	Yes	Country name.
receiver.phone_number	string	Yes	Phone number including country and area code.

Inventory of contents data

Packlink Attribute name	Packlink Attribute type	Packlink Attribute required	Packlink Attribute description
tariff_number	string	Yes	The tariff number of an item, also known as the "harmonized code" or "HS code," is a standardized number given to a particular product or type of product for easier identification during customs processing and better standardization of international shipping.
description	string	Yes	Detailed description of the item in English (incl material, brand, size, etc).
country_of_origin	string	Yes	Country of manufacture of the item. ISO-3166-1 Alpha-2.
item_value.currency	string	Yes	Currency of the item's value. ISO-4217.
item_value.value	number	Yes	Value of the item.
item_weight	number	Yes	Weight of each item, in kilograms.
quantity	integer	Yes	Number of identical items included.

Shipment details data

Packlink Attribute name	Packlink Attribute type	Packlink Attribute required	Packlink Attribute description
parcels_size	integer	Yes	Amount of parcels on the shipment.
parcels_weight	number	Yes	Total weight of all parcels combined.
cost.currency	string	Yes	Currency of the item's value. ISO-4217.
cost.value	number	Yes	Value of the item.

Signature data

Packlink Attribute name	Packlink Attribute type	Packlink Attribute required	Packlink Attribute description
full_name	string	Yes	Full name including all names and surnames..
city	string	Yes	City.

Shipment synchronization

The shipment data schema should be extended with the following fields:

Packlink Attribute name	Packlink Attribute type	Packlink Attribute required	Packlink Attribute description
has_customs	boolean	Yes (if international shipment)	This is always set to <i>true</i> if customs are created.
customs.customs_invoice_id	string	Yes (if international shipment)	The customs id from the creation response.

CR-SET-66 - PrestaShop

Product HS code and country of origin

Products in Prestashop don't have the HS code field or the origin country.

Customer phone number and tax ID/VAT number

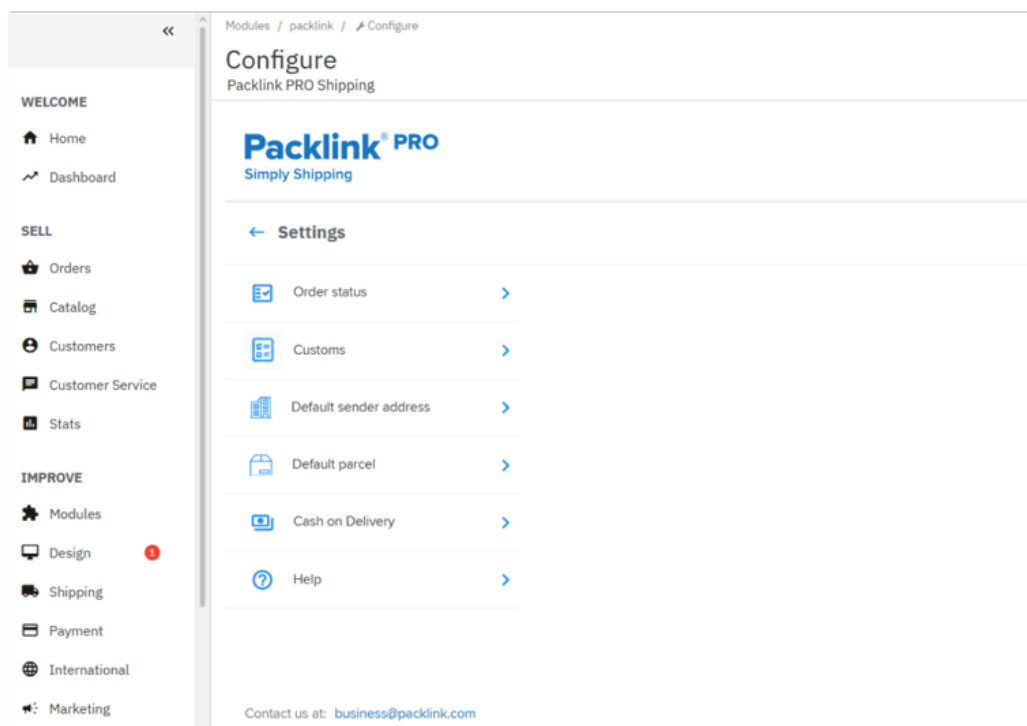

Customers in Prestashop have the phone number and company VAT, but it doesn't have the customer tax ID.

Custom fields support

Since Prestashop is on-premise system, the integration can extend both product and customer entities.

Conclusion

The missing fields need to be mapped inside the Packlink plugin settings. The plugin will add them upon installation/migration from previous versions and prepopulate it in the plugin configuration.

CR-SET-66 - WooCommerce

Product HS code and country of origin

Products in WooCommerce don't have the HS code field or the origin country.

Customer phone number and tax ID/VAT number

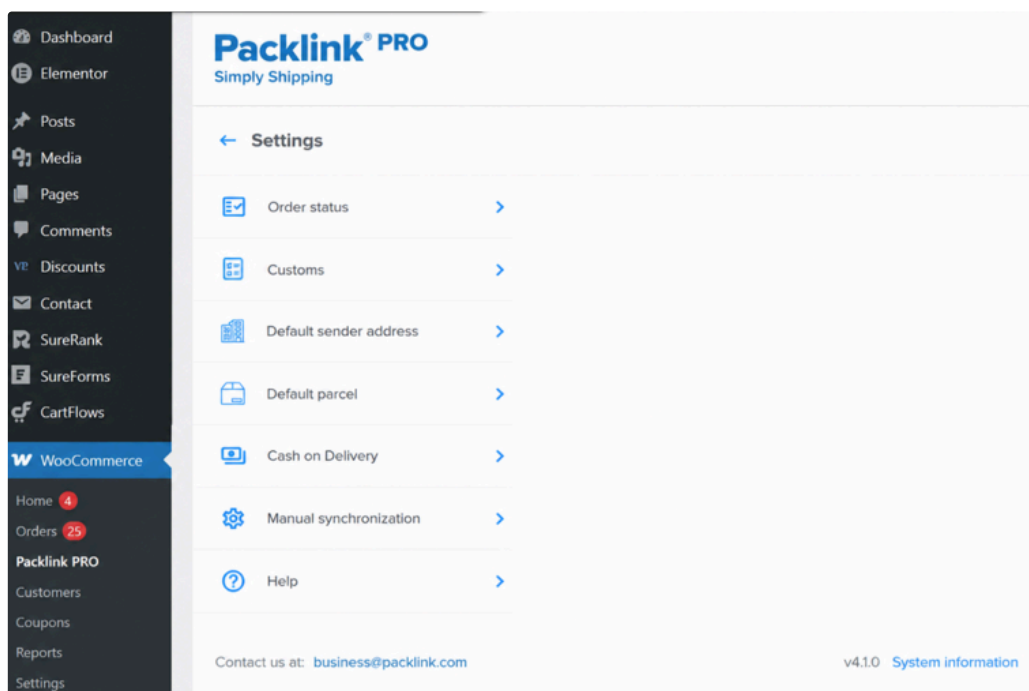

Customers in WooCommerce have the phone number, but it doesn't have the company VAT and the customer tax ID.

Custom fields support

Since WooCommerce is an on-premise system, the integration can extend both product and customer entities. Also, WooCommerce supports custom attributes.

Conclusion

The missing fields need to be mapped inside the Packlink plugin settings. The plugin will add them upon installation/migration from previous versions and prepopulate it in the plugin configuration.
